EDUCATION

Bachelor of Engineering (Information Technology) (8.87 CGPA)

Expected 2025

Thadomal Shahani Engineering College Mumbai, India

Higher Seconday Examination (89.3%)

2020 - 2021

Pace JR Science College Mumbai, India

SKILLS

Languages & Frameworks

Python, Go, C++, C, JS, TS, Java, HTML, React, Flask, Django, Angular

Tools & Software

Git, Github, Pyspark, Databricks, AWS, Zilliz, MongoDB, MySQL, Kafka,

Docker, Kubernetes

EXPERIENCE

SDE Intern

May 2024 - July 2024

Reliance Industries Ltd.

Navi Mumbai, Maharashtra, India

- Developed a data pipeline that processed over 40000 data points daily from Platts services via WebSocket and API, using Kafka clusters in a multi-threaded Python application to improve data flow efficiency.
- Built and deployed multi-threaded consumer applications in Python to manage data for over 500,000 records in databases, providing two API endpoints: an SSE pub/sub endpoint for real-time frontend updates and a database query API.
- Improved Angular micro-frontends by adding live data tables and database data tables, increasing efficiency by 30%. and created dashboards for backtesting trading strategies with Python libraries.

Research Analyst Intern

May 2023 - July 2023

Decimal Point Analytics

Mumbai, Maharashtra, India

- Contributed 7 tasks regarding the refinement of research methodologies and processes, improving efficiency and accuracy in data collection, analysis, and reporting.
- Researching on Vector Databases (Zilliz Cloud) understanding the concepts of data vectorization which can make the data quering time upto 50% faster .

PROJECTS

TTT (Game Server) — *Go, HTMX, Templ*

- Utilizes the actor model for better encapsulation and scalability, with channel communication between actors for efficient message passing.
- Implements real-time game updates via WebSockets, ensuring seamless state synchronization across clients.
- Designed scalable game logic for game creation, move validation, and status updates, with a clear structure for actors, messages, handlers, and logic. ([Repo](#))

FastBank — *Go, Postgres, RabbitMQ, Prometheus, Redis*

- Developed in Go using the Echo framework and hexagonal architecture, ensuring modularity, scalability, and reliability. Provides core banking functions secured by JWT and PostgreSQL.
- Uses message queues for non-blocking operations, improving system efficiency and scalability. Includes Report Service, Notification Service, and Monitoring Service for improved insights, real-time updates, and performance optimization. ([Repo](#))

Tollywood — *Go, GRPC*

- Provides a framework for creating lightweight, concurrent actors that communicate through message passing, ensuring efficient and scalable communication.
- Supports remote actor management and communication via gRPC. Integrates seamlessly with existing Go applications ([Repo](#))

EXTRA-CURRICULAR ACTIVITIES AND ACHIEVEMENTS

- Won Smart India Hackathon and 5 more Hackathons at National level
